

# Use Case 13: Analysis of epigenomic variation in breast tumors

Epigenome Informatics Workshop  
Bioinformatics Research Laboratory

# The Data Used in Case Study 13

1. Dedeurwaerder, S.et al. (2011) "Evaluation of the Infinium Methylation 450K technology", Epigenomics 3(6):771-84.
2. **16 breast tissue samples were profiled** (8 normal, 8 primary tumor samples)
3. The paper evaluates 450K technology and does not report any analysis concerning cancer biology.
4. We analyze the data to explore epigenomic states and cell type composition of normal and tumor samples.

# Overview of Case Study 13

Part 1: Cluster all 16 breast tissue samples using the Epigenomic Heatmap tool

Part 2: Compare the 16 samples against the Human Epigenome Atlas to determine tissue compositions using the Epigenomic Heatmap tool

Part 3: Identify differentially methylated probes, genes, and pathways between 8 normal and 8 tumor samples using the LIMMA comparison tool

# **Part 1: Cluster all 16 breast tissue samples**

# Part 1: Introduction

- We will apply **Epigenomic Heatmap tool** to cluster all 16 breast tissue samples.
- We anticipate a pattern discriminating 8 tumor samples from 8 normal samples.
- The tumor samples may be more heterogeneous than normal samples

### Tool Settings

with questions or comments, or for help using it on your own data.

This tool can be used to launch the Grid Viewer application developed by Sriram Raghuraman at [BRL](#).

**The GridViewer allows you to:**

- Partition tracks into a grid
  - This is done via the user telling us the name of the track attribute used to partition along the X-axis and the name of a 2nd track attribute used to partition along the Y-axis.
- Organize ALL the tracks in 1+ databases
  - Only the tracks which have the X and Y attribute set will be presentable in the grid

There are also some useful little customizations that can be supplied as parameters (titles, axis labels, etc).

**Databases with tracks of interest:**

Database: *Breast 450K* Group: *Epigenome ToolSet Demo Input Data*

**Settings**

X-axis attribute: eaAssayType

Y-axis attribute: eaSampleType

Page Title: Grid Viewer: Tracks from Brea

Grid Title: Tracks from Breast 450K

X Label: eaAssayType

Y Label: eaSampleType

**Advanced Settings:**

Submit Cancel

Step 2. Select which data attribute to be displayed on the X and Y-axes in the output.

Step 3. Click "Submit"

# Part 1: Access You Result

You will receive an email with the following message:

“Genboree: Your Epigenomic Experiment Heatmap Tool job is complete”

The body of the email will contain the following note and a link to the results file: “Result File Location in the Genboree Workbench:

[http://www.genboree.org/java-bin/project.jsp?projectName=Use\\_Case\\_13](http://www.genboree.org/java-bin/project.jsp?projectName=Use_Case_13)

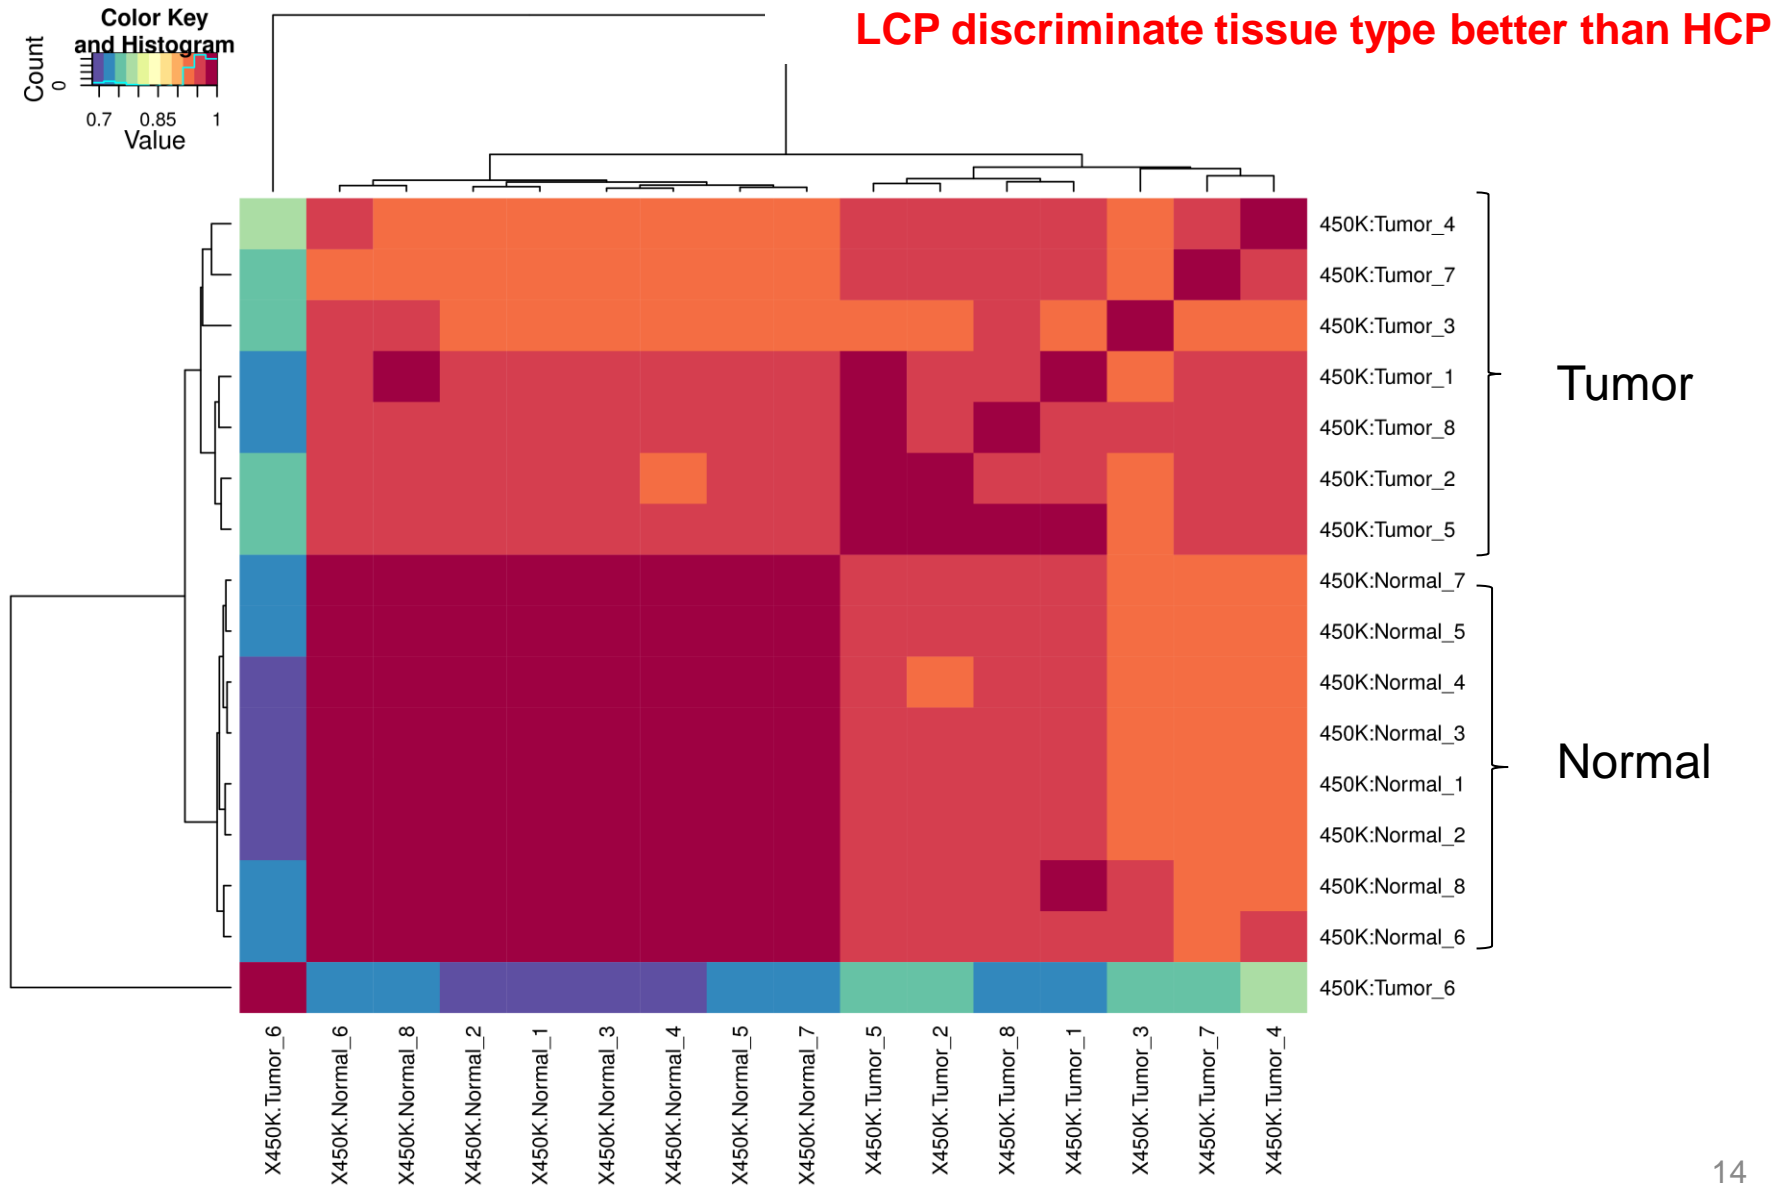

The screenshot displays the Genboree web application interface. At the top, there is a navigation menu with links for Home, Workbench, Browser, Profile, Groups, Projects, Databases, Tools, Log Out, and Help. Below the navigation, a message states: "(This is a recently added feature. Report issues to Genboree Admin.)" and an "Edit Mode" button is visible. The main heading is "Use\_Case\_13\_GU" with a subtext: "[[ Put description for the project 'Use\_Case\_13\_GU' here ]]". A section titled "Project News:" contains a news item dated 2012/5/16: "Genboree User ran Epigenomic Heatmap Tool (EpigenomeExpHeatmap2012-05-16-19 16 03) and the results are available at the link below." This news item includes two bullet points: "Study Name: EpigenomeExpHeatmap2012-05-16-19 16 03" and "Link to results". The footer contains logos for the Bioinformatics Research Laboratory (BRL) and the Human Genome Sequencing Center (HGSC), along with contact information and a copyright notice: "© 2001-2012 Bioinformatics Research Laboratory (400D Jewish Wing, MS:BCM225, 1 Baylor Plaza, Houston, TX 77030, 713-798-5433)". A yellow box in the bottom right corner contains the text "Questions or comments?".

# Part 1: Heatmap Output (Promoters:LCP)

# Part 1: Heatmap Output (Promoters:HCP)

**Part 2: Compare 450K profiles (8 tumor, 8 normal) against reference epigenomes from the Epigenome Atlas**

## Part 2: Introduction

- In Part 1, we found that tumor and normal samples are different. Now we ask if the difference is due to tissue composition by comparing the samples against the Human Epigenome Atlas.
- Plan: Compare 8 tumor and 8 normal 450K profiles against normal tissue profiles from the Human Epigenome Atlas using the Epigenomic Heatmap tool
- Note: We compare epigenomic profiles obtained using different technologies (Illumina 450K vs MeDIP-seq).

# Reference MeDIP profiles of Normal Tissues and Cell Lines from the Atlas

## Human Epigenome Atlas

[The Current Release \(Release 6\) of the Human Epigenome Atlas](#)

The Human Epigenome Atlas is produced by the [NIH Epigenomics Roadmap Consortium](#).

The Human Epigenome Atlas includes human reference epigenomes and the results of their integrative and comparative analyses. Successive releases of the Atlas will provide progressively more detailed insights into locus-specific epigenomic states, including histone marks and DNA methylation marks across specific tissues and cell types, developmental stages, physiological conditions, genotypes, and disease states.

value

Most tumor samples appear to contain more blood and immune cells than normal tissue.

# Part 2: Heatmap Output (Promoters:HCP)

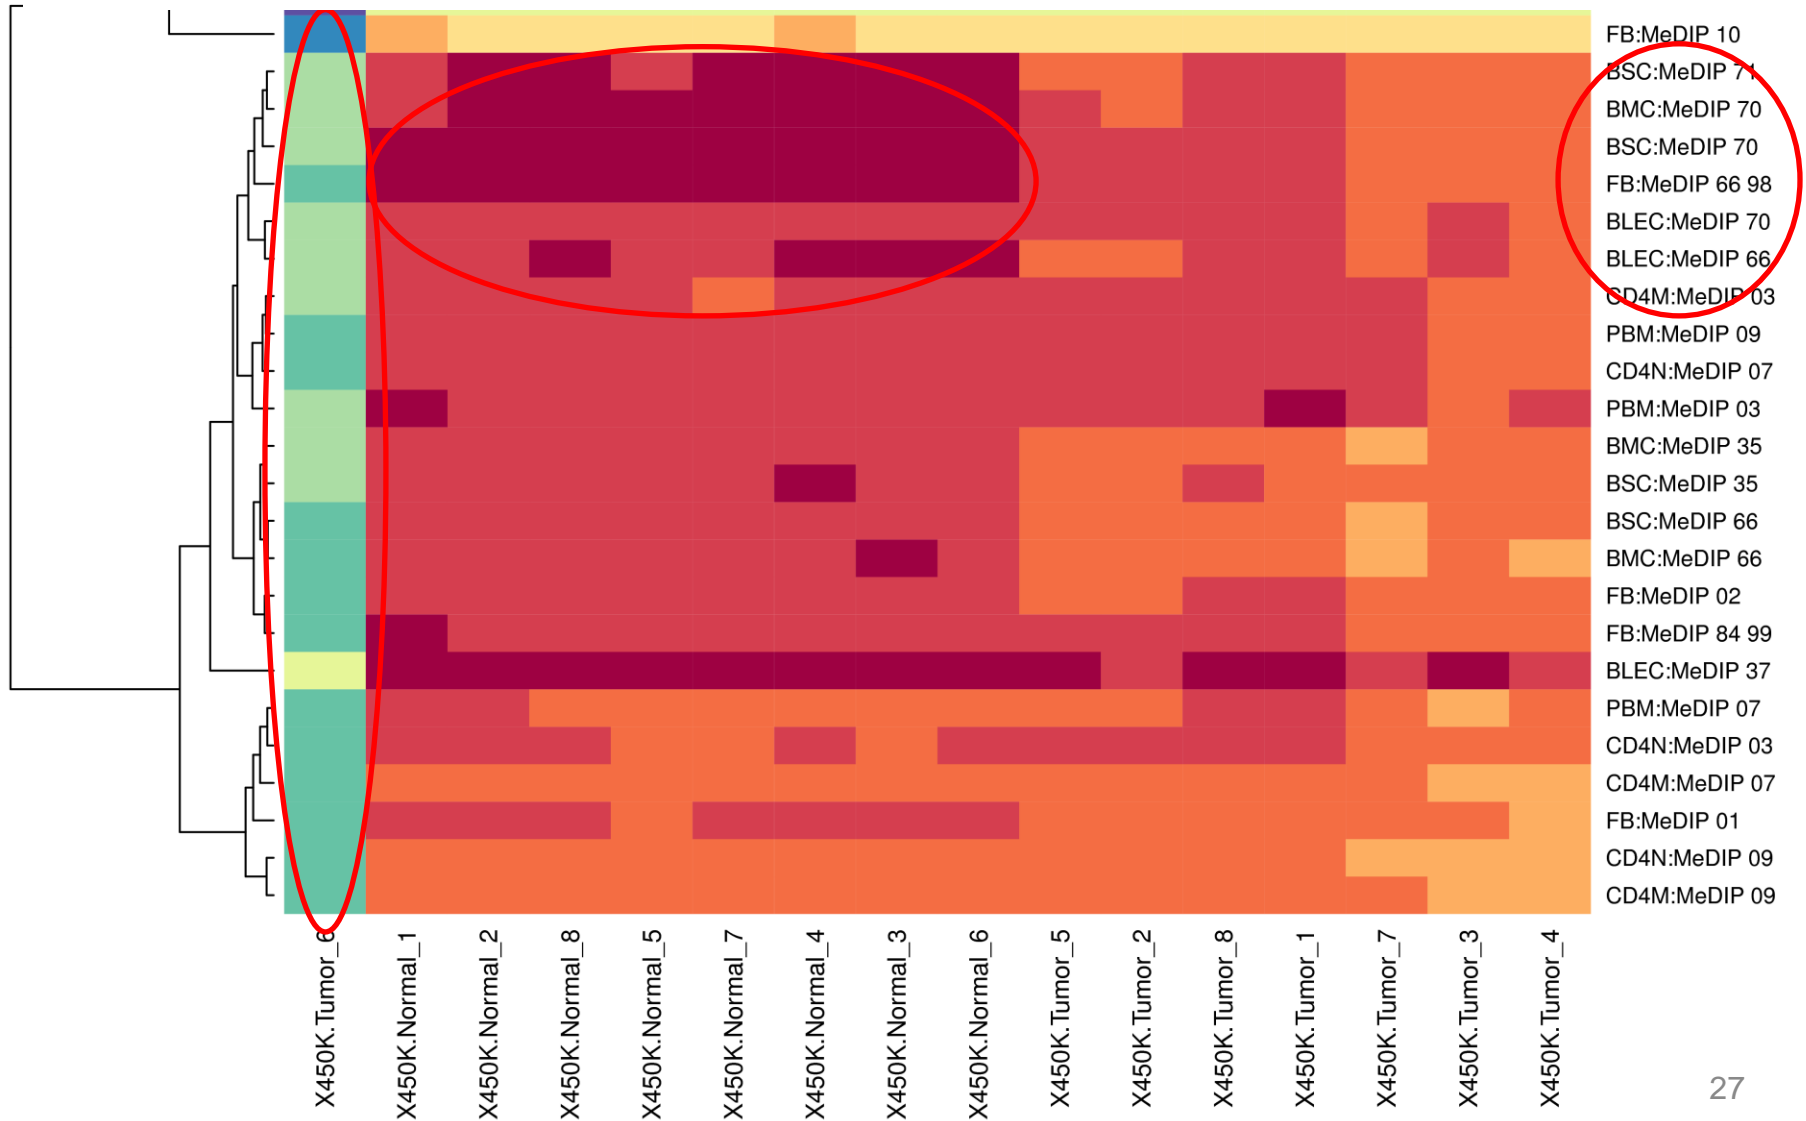

# Part 2: Heatmap Output (Promoters:ICP)

# Part 2: Heatmap Output (Promoters:HCP)

1. Normal samples (450K data) are most similar to normal breast cell types (MeDIP-seq data)
2. Tumor 6 shows a unique profile

# **Part 3: LIMMA\_Comparison: Breast Normal vs Breast Tumor**

## Part 3: Introduction

- In Part 2, we found that **most breast tumor samples appear to contain an excess of blood and immune cells.**
- Hypothesis: Comparison of normal and tumor tissue should reveal **differentially methylated genes that are involved in immune related pathways or biological processes.**
- Plan: Identify differentially methylated probes, genes, and pathways by comparing normal and tumor tissues using the LIMMA comparison tool.

Genome ToolSet Demo Input

Describer

Template for Human Genome, Build Hg19

### Tool Settings

with questions or comments, or for help using it on your own data.

This tool can be used to launch the Grid Viewer application developed by Sriram Raghuraman at [BRL](#).

**The GridViewer allows you to:**

- Partition tracks into a grid
  - This is done via the user telling us the name of the track attribute used to partition along the X-axis and the name of a 2nd track attribute used to partition along the Y-axis.
- Organize ALL the tracks in 1+ databases
  - Only the tracks which have the X and Y attribute set will be presentable in the grid

There are also some useful little customizations that can be supplied as parameters (titles, axis labels, etc).

**Databases with tracks of interest:**

Database: *Breast 450K* Group: *Epigenome ToolSet Demo Input Data*

**Settings**

X-axis attribute: eaAssayType

Y-axis attribute: eaSampleType

Page Title: Grid Viewer: Tracks from Brea

Grid Title: Tracks from Breast 450K

X Label: eaAssayType

Y Label: eaSampleType

**Advanced Settings:**

Submit Cancel

Genboree is built & maintained by the **Bioinformatics Research Laboratory**

BCM  
Baylor College of Medicine

Step 2. Select which data attribute to be displayed on the X and Y-axes in the output.

Step 3. Click "Submit"

# GENBOREE

BCM  
Baylor College of Medicine

System/Network Data QC and Pre-processing Genome Transcriptome Cistrome Epigenome Metagenome Visualization

## Welcome to the Genboree Workbench!

- The **Data Selector** tree on the left shows the data entities to which you have access.
- Drag items to be used as tool *inputs* over to the **Input Data** area.
- Drag items to be used as tool *output targets* over to the **Output Targets** area.
- Tools which can be run on your selections will be highlighted in green.
- Unsure about what kinds of items a particular tool can take as input or output targets ??
  - Just click the tool button when it is not highlighted to see help information.

### Job Submission Status

## Launch Grid Viewer

 Please click the link below to launch the grid viewer:

**Launch Grid Viewer.**

If you have questions, please contact [genboree\\_admin@genboree.org](mailto:genboree_admin@genboree.org) for assistance.

OK

↑ ↓ ✕

Step 4. Click "OK"

- Select cells by clicking and dragging, then use the "View" button to view selections in the Atlas Gene Browser or the UCSC Genome Browser
- NOTE: Some pages may not be accessible over low bandwidth

Step 5: select 'Normal' signals

Step 6. Save selection

The screenshot shows the 'Save Track Selections' dialog box with the following fields and options:

- Choose a group and database to save selections in:**
- Select a Group:** This is the group where your selections will be saved. The dropdown menu is set to 'GenboreeUser\_group'.
- Select a Database:** Choose a database within your group to save to. The dropdown menu is set to 'GenboreeUser\_database'.
- Save Selection as:** Enter a name to identify this set of selections. The text box contains 'UC13\_450K\_Normal'.
- Buttons: 'Save Selections' and 'Cancel'.

Red arrows indicate the following steps:

- Step 7: Select your user group (points to the 'GenboreeUser\_group' dropdown).
- Step 8: Select your database (points to the 'GenboreeUser\_database' dropdown).
- Step 9: Name this list of tracks (points to the 'UC13\_450K\_Normal' text box).
- Step 10: Click "Save Selections" (points to the 'Save Selections' button).

- Select cells by clicking and dragging, then use the "View" button to view selections in the Atlas Gene Browser or the UCSC Genome Browser
- NOTE: Some pages may not be accessible over low bandwidth

Step 12. Save selection

Step 11: select 'Normal' signals

eaSampleType	450K
Normal	8
Tumor	8

**Save Track Selections**

**Choose a group and database to save selections in:**

**Select a Group:**  
This is the group where your selections will be saved  
GenboreeUser\_group

**Select a Database:**  
Choose a database within your group to save to  
GenboreeUser\_database

**Save Selection as:**  
Enter a name to identify this set of selections  
UC13\_450K\_Tumor

Save Selections    Cancel

Step 13. Select your user group

Step 14. Select your database

Step 15. Name this list of tracks

Step 16. Click "Save Selections"

System/Network | Data | QC and Pre-processing | Genome | Transcriptome | Cistrome | **Epigenome** | Metagenome | Visualization

## Welcome to the Genboree Workbench!

Step 17a. Drag and drop two selected lists of tracks from your database and an ROI track (Promoters:ALL) from the ROI Repository group into the Input Data box

17b Populate "Output Targets" with the appropriate database and project folder

Step 18.

-Click on "Epigenome"  
 -Click on "Analyze Signals" -> "Compare by LIMMA" -> "Tracks"  
 -Start analysis job using default settings ("submit")

The screenshot shows the Genboree Workbench interface. On the left is a tree view of the database structure, including 'GenboreeUser\_database' and 'Projects'. The 'Input Data' panel on the right contains three tracks: 'UC13\_450K\_Normal', 'UC13\_450K\_Tumor', and 'Promoters:ALL'. The 'Output Targets' panel contains two entries: 'GenboreeUser\_database' and 'Use\_Case\_13\_GU'. A red dashed arrow originates from the 'Promoters:ALL' track in the 'Input Data' panel and points to the 'Use\_Case\_13\_GU' entry in the 'Output Targets' panel.
